

Strapping

White is standard, with Dacron backing. Some colors are available but do not have Dacron backing and are not recommended for instep strap.

Forefoot, instep, and calf are standard. Maximum control is optional per request.

Footplate Design

Morton's Extension – stabilizes pronating foot, medial forefoot post (insufficient incline)

PF 1st Ray Extension – indicated for a rigid first ray, supination control (insufficient incline)

Proximal to mets trim – midfoot control is required only (insufficient incline)

Sulcus trim: terminal stance point rocker (insufficient incline or excessive incline)

Full foot trim – COM control rigid lever arm needed to end of toe (excessive incline)

Morton's Extension

PF 1st Ray Extension

Posterior Cut-out

3/4" Swoop

The DRAFO is designed to function during stance phase of gait by manipulating the ground reaction forces through the three rockers of gait. Understanding how the foot can control the proximal segments is key since the foot is the foundation for stability.

DRAFO HP

- Insufficient shank incline
- Maximum knee control

DRAFO MP

- Insufficient shank incline
- Minimal knee control

DRAFO SA Lite

- Insufficient shank incline
- Solid heel
- SMO inner boot

DRAFO HP Transformer

- Excessive shank incline
- MP inner pre-tib wraparound component

DRAFO HP Articulated

- Swing control phase only
